

# Salix Will Present Rifaximin Data at AASLD's The Liver Meeting(R) 2022

November 04, 2022

**LAVAL, QC / ACCESSWIRE / November 4, 2022 /** Bausch Health Companies Inc.

(NYSE:BHC)(TSX:BHC) ("Bausch Health") and its gastroenterology business, Salix Pharmaceuticals ("Salix"), today announced one de novo abstract that is being presented at [The Liver Meeting® 2022](#)

, organized by the American Association for the Study of Liver Diseases (AASLD), which is taking place November 4-8 in Washington, D.C.

The abstract being presented at AASLD's The Liver Meeting 2022 is:

- Sanyal, A. et al. *"Rifaximin Plus Lactulose Versus Lactulose Alone for Reducing the Risk of Overt Hepatic Encephalopathy Recurrence: A Pooled Subgroup Analysis."*

## About XIFAXAN®

### Indications

XIFAXAN® (rifaximin) 550 mg tablets are indicated for the reduction in risk of overt hepatic encephalopathy (HE) recurrence in adults and for the treatment of irritable bowel syndrome with diarrhea (IBS-D) in adults.

### IMPORTANT SAFETY INFORMATION

- XIFAXAN is contraindicated in patients with a hypersensitivity to rifaximin, rifamycin antimicrobial agents, or any of the components in XIFAXAN. Hypersensitivity reactions have included exfoliative dermatitis, angioneurotic edema, and anaphylaxis.
- *Clostridium difficile*-associated diarrhea (CDAD) has been reported with use of nearly all antibacterial agents, including XIFAXAN, and may range in severity from mild diarrhea to fatal colitis. If CDAD is suspected or confirmed, ongoing antibiotic use not directed against *C. difficile* may need to be discontinued.
- There is an increased systemic exposure in patients with severe (Child-Pugh Class C) hepatic impairment. Caution should be exercised when administering XIFAXAN to these patients.
- Caution should be exercised when concomitant use of XIFAXAN and P-glycoprotein (P-gp) and/or OATPs inhibitors is needed. Concomitant administration of cyclosporine, an inhibitor of P-gp and OATPs, significantly increased the systemic exposure of rifaximin. In patients with hepatic impairment, a potential additive effect of reduced metabolism and concomitant P-gp inhibitors may further increase the systemic exposure to rifaximin.
- In clinical studies, the most common adverse reactions for XIFAXAN were:
  - HE ( $\geq 10\%$ ): Peripheral edema (15%), nausea (14%), dizziness (13%), fatigue (12%), and ascites (11%)
  - IBS-D ( $\geq 2\%$ ): Nausea (3%), ALT increased (2%)
- INR changes have been reported in patients receiving rifaximin and warfarin concomitantly. Monitor INR and prothrombin time. Dose adjustment of warfarin may be required.
- XIFAXAN may cause fetal harm. Advise pregnant women of the potential risk to a fetus.

To report SUSPECTED ADVERSE REACTIONS, contact Salix Pharmaceuticals at 1-800-321-4576 or FDA at 1-800-FDA-1088 or [www.fda.gov/medwatch](http://www.fda.gov/medwatch)
